

How To Do Basic Check Before Investing

1

How to understand if contract is verified?

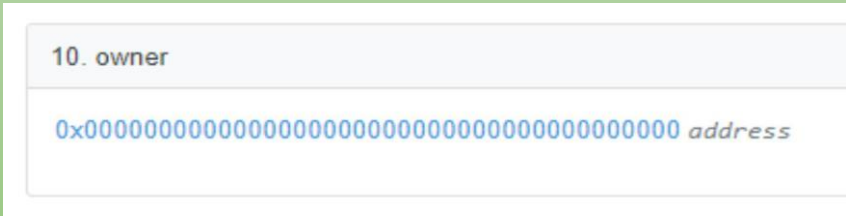

Go to Contract address (Bscscan), if the Contract tab has green "checked" badge contract is verified. If not, the contract is not verified and code source is not visible.

2

How to understand if ownership is renounced ?

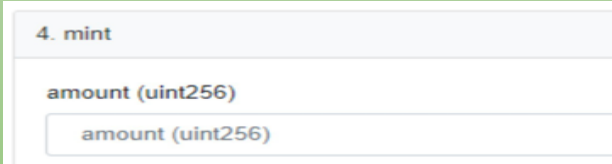

Go to contract address, Read section. Search for something like Owner. Renounced ownership address will look like:

3

How to find if mint function is exist?

Go to contract address, Write section. If you see a mint function and ownership is a wallet, that means Owner can mint tokens. If project owner tells you it's for game or rewards etc... Run away :)

4

How to understand if Automatic Liquidity is going to Dead Address?

If the project is launched, go to Poochinchart of the token. In the Info side you will see LP Holdings, click on holders. If you see a wallet holding more than 5%, that means this wallet can remove liquidity. If you see Dead address holding a lot, that means automatic Liquidity is going to Dead address and nobody can remove.

If the project is not launched yet, go to contract address- Code section and search for «AddLiquidity method» it should look like :

```
// add the liquidity
(,uint256 liquidity) = uniswapV2Router.addLiquidityETH{value: ethAmount}{
    address(this),
    tokenAmount,
    0,
    0,
    address(0), //
```

This address is dead address. If address you see in different format that means Auto Liquidity is going to a wallet and it is not safe.

How to understand if there is a limit for fees?

Go to contract address, Code section. Search for something like setMarketingFee.

// If the contract has no limit for fees code will look like:

```
function setMarketingFee(uint256 value) external onlyOwner{
    marketingFee = value;
    totalFees = liquidityFee.add(marketingFee);
}
```

// If the contract has limit for fees than code will look like:

```
function setMarketingFee(uint256 value) external onlyOwner{
    marketingFee = value;
    totalFees = liquidityFee.add(marketingFee);
    require(totalFees < 20, "Total Fees should be < 20 !");
}
```

5

How to understand if Tokens / LP are locked?

Everybody know how to check holders. If you see a badge just near the address it means it's a contract.
